

Church & Dwight Co., Inc ENVIRONMENT – WATER POLICY

Church & Dwight products have been a standard of quality and environmental responsibility since 1846. This long-standing commitment has enabled us to become a leading contributor to the protection of the environment. We are committed to responsible management of the environmental impacts associated with our products and operations. We believe environmental protection is a management responsibility, as well as, the responsibility of every Company employee.

The intent of this policy is to ensure a common understanding of the Company's commitment to responsible water resource management.

- ❖ Access to water and proper sanitation are essential to human health and quality of life.
- ❖ Water is a necessary resource for the sustainable future of our business, the communities in which we operate, and the planet.
- ❖ Responsible company management of our water resources is critical to ensure the availability of adequate water volume and quality for the sustainable future of our company and the communities in which we live and work.
- ❖ Since water quality and quantity are critical aspects of our operations, we strive to understand the material risks associated with water use at our facilities, the responsible management of water as a shared community resource, and conserve water resources especially in areas where scarcity and other water stresses exist.
- ❖ We routinely evaluate opportunities to reduce the use of water in our products and the efficient use in processing and cleaning.
- ❖ We strive towards an annual goal to reduce water use as noted in our Sustainability Report. Our goal and progress towards that goal is updated annually in our Report.
